

SIPaKMeD (Roboflow derivative)
grouped by field name
+ image overlap
340 fields excluded
(unresolved provenance)

APCData (Mendeley)
grouped by specimen code
+ image overlap
5 fields excluded

HMCHH-TCT-CellDet
validation split,
abnormal cells only;
never used for training
or tuning

Component-disjoint splits (15% test, 15% validation)
SIPaKMeD train/valid/test 634/123/140 · APCData 317/50/45
YOLOv8n, 2 training sets × 3 seeds (17, 43, 101), identical budget

Dense reference:
40 SIPaKMeD fields
(1,067 cells; single reviewer)
overlap components withheld
from all training

Frozen component-level split
20 development fields
→ threshold, temperature
20 evaluation fields
→ reported once

External evaluation
1,077 HMCHH fields
1,837 abnormal cells

threshold carried over
from dense development;
no retuning
